## Courtroom Server unable to connect to Enterprise Server running on SSL

KVRN Kiran · Thursday, October 16th, 2014

Courtroom Server by default creates plain connections (non-SSL) to decrease communication load between Courtroom Server and Enterprise Server, as many Courtroom Servers are connected to internet with dial-up connections.

To enable Courtroom Server to establish secured connection to Enterprise Server, use the following steps:

- \* Close Courtroom Server
- \* Goto Courtroom Server's installation folder (default – C:\Program Files (x86)\LegalCraft\Courtroom Server or C:\Program Files\LegalCraft\Courtroom Server)
- \* Open the file server.props from the installation folder using any text editor
- \* There will be a line

```
server.DialupConnection=true
```

Change it to

```
server.DialupConnection=false
```

Save and close the file.

Start Courtroom Server and it will establish secure connection to Enterprise Server.
